ABOUT CENERGY

Cenergy specializes in supplying expert workforce solutions to the world's industry leaders. Our mission is simple yet powerful: we provide specialized energy personnel, safety solutions, inspection solutions, logistics, and vendor management support. We relentlessly pursue innovation, constantly seeking new ways to improve and adapt to meet the evolving needs of our clients. With a sense of ownership ingrained in our culture, we take full responsibility for our actions and outcomes, ensuring accountability at every step. Integrity and trust form the bedrock of our relationships, fostering transparency, honesty, and mutual respect. And amidst it all, we prioritize happiness, believing that a positive work environment is essential for personal and professional growth.

JOBS WITH CENERGY

SENIOR GNC ENGINEER

Chandler, AZ

Designs, develops, implements, verifies, and tests algorithms and software and simulation tools to perform guidance, navigation and control of aircraft, spacecraft, submersibles, surface ships, missiles, launch vehicles, and upper stages during powered and coast phases of launch, flight, earth orbit, interplanetary cruise and orbital insertion, as well as during staging events. Navigation functions include statistically processing measured data points and substituting them into algorithms that simulate physical reality. Guidance functions include the formulation of specific equations to achieve a desired position, orientation or orbit in space. Control design and analyses processes consist of the development of the control laws and hardware and software requirements for aircraft, launch vehicles and/or spacecraft.

ELECTRONICS TECHNICIAN

Riviera Beach, FL

Seeking a skilled Electronics Technician to join our high performance team supporting advanced Underwater mission systems. The ideal candidate will have extensive hands on experience in soldering, crimping, wire harness fabrication, and system troubleshooting working with multimeters and other various troubleshooting tools.

EMBEDDED S/W ENGINEER

Grand Prairie, TX

Seeking qualified software engineers to perform requirements analysis, design, develop, implement, test, integrate, and maintain embedded real-time C++ software and Data Distribution Service (DDS) middleware software for missile programs to work on-site full-time 4/10A – 1st Shift at Grand Prairie, TX location

INSPECTOR

Littleton, CO

Uses predetermined methods, operations, setups and prescribed specifications to inspect visually in-process and completed products such as electronic units and subsystems, precision electromechanical assemblies or mechanical units, subassemblies, structural flaws, internal defects, and missing welds. Uses various measuring devices. Accepts, rejects, or reworks defective or malfunctioning units or systems. Works from blueprints, diagrams, dial indicators, preset micrometers, scales, fixtures, customer specifications, drawing or inspection instructions and checklists. May monitor and verify quality in accordance with statistical process or other control procedures.

CLAREMONT LINCOLN
UNIVERSITY

Claremont Lincoln University

Claremont Lincoln University is a non-profit, WSCUC-accredited, 100% online military-inclusive University committed to honoring those who serve our country by making quality education for military members, veterans, and their families an affordable reality. At CLU, we ensure that our military-affiliated students have the resources and support they need to be successful whether they're at home or deployed. CLU programs are:

- **Accessible:** 100% Online and asynchronous
- **Affordable:** Tuition under \$20,000
- **Relevant:** Taught by dedicated, engaged, and accessible faculty
- **Recognized:** Accredited by WASC Senior College and University Commission
- **Connected:** Student-to-Faculty ratio – 14:1

CLU is where changemakers go to build their capacity to create meaningful impact in their organizations, their communities, and our world. To discover the CLU Difference and start your application, visit: claremontlincoln.edu/military

Creating Coding Careers

Creating Coding Careers equips transitioning service members, veterans, and military families to launch high-impact technology careers without pausing their lives. Guided by our Humanity Practice, we prioritize people over profit and collaboration over competition, embedding purpose and integrity into everything we do.

Our journey begins with a no-cost, online, self-paced Pre-Apprenticeship that is open to anyone. While you progress through a curated learning path on your own schedule, you plug into a vibrant peer community where daily discussion, code challenges, and project feedback keep you motivated and accountable. The Pre-Apprenticeship on-ramp is entirely separate from SkillBridge and provides the foundational skills needed to qualify for more advanced training.

Active-duty members who meet SkillBridge eligibility can apply for our SkillBridge program, tackling real-world projects that mirror industry workflows. Graduates may then have the option to transition into our U.S. Department of Labor registered apprenticeship program, earning a salary, benefits, and nationally recognized credentials (including college credit) while continuing to master their craft. Whether you pursue AI Prompt Engineering, Technical Sales and Consulting, Cyber Security, Full-Stack Software Engineering, QA Automation, or ServiceNow Development, CCC delivers a proven earn-and-learn pathway. Ready to turn your passion into a purpose-driven tech career? Join us and help build a future where opportunity is accessible to all.
